

centro congressi per la scienza

Scienza e ricerca al servizio del progresso

•FUTURE INFRASTRUCTURE PROJECT SUPPORTING CULTURAL PROJECTS

CENTRO CONGRESSO PER LA MEDICINA

Our mission is to **connect healthcare professionals, academia, and industry** through high-quality scientific events and practical training—supporting improved patient outcomes, clinical excellence, and technology adoption in a transparent and ethical framework.

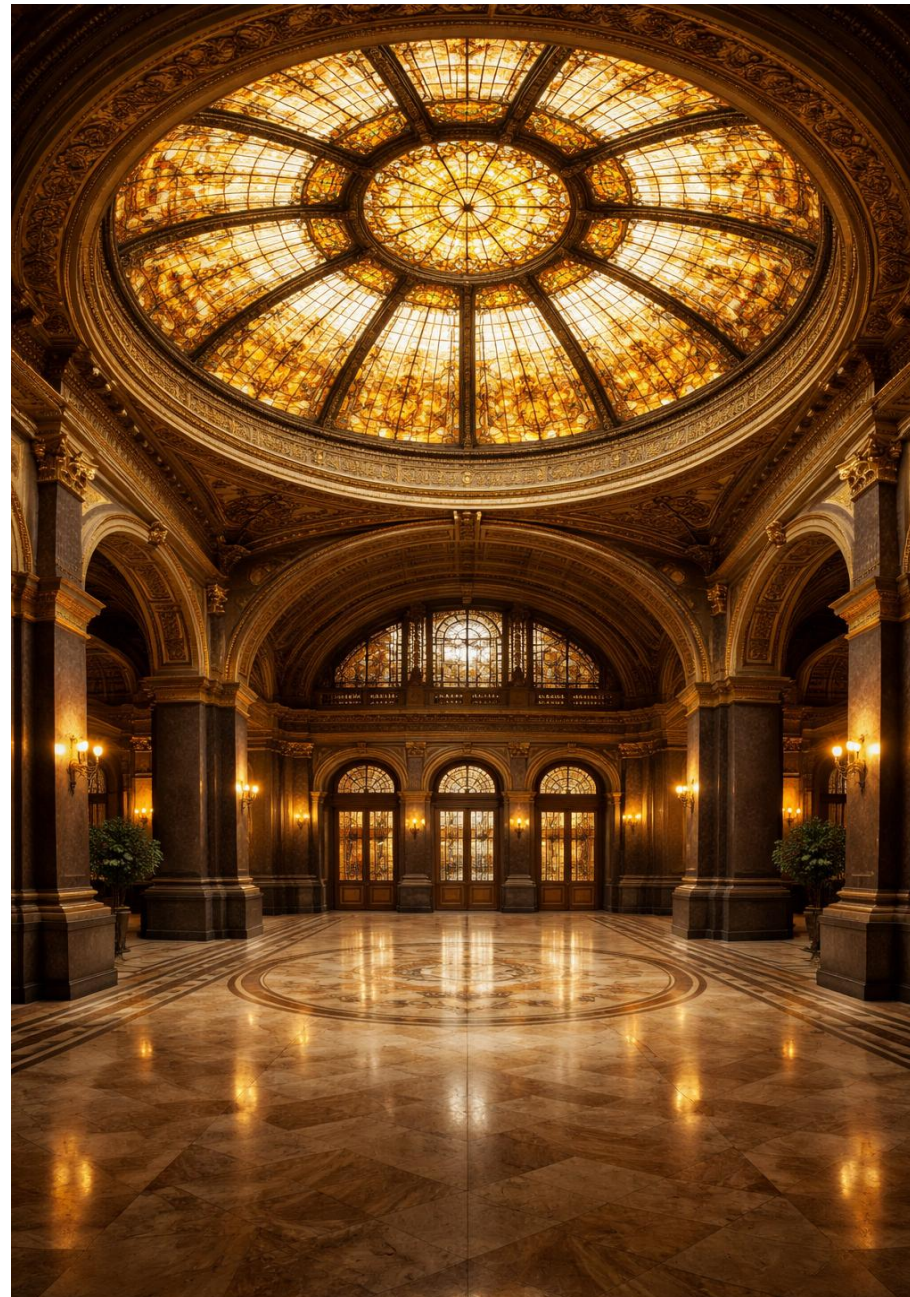

The Center aims to become a **reference point for scientific meetings and healthcare innovation**, supporting continuous professional development and accelerating the transfer of knowledge from research to clinical practice—while providing industry stakeholders with a reliable, high-quality setting to engage with the medical community.

We are developing for the future a new **Congress and Innovation Center dedicated to Medicine and Science**, designed to become a high-impact hub for **medical education, scientific exchange, and compliant healthcare industry engagement**.

The Center will host **conferences, workshops, product demonstrations, and accredited training programs** focused on **pharmaceuticals, medical devices, and hospital equipment**, creating a structured environment where clinical needs, research advances, and responsible innovation can meet.

•CONFERENCE HALL: A FUTURE INFRASTRUCTURE PROJECT SUPPORTING CULTURAL PROJECTS

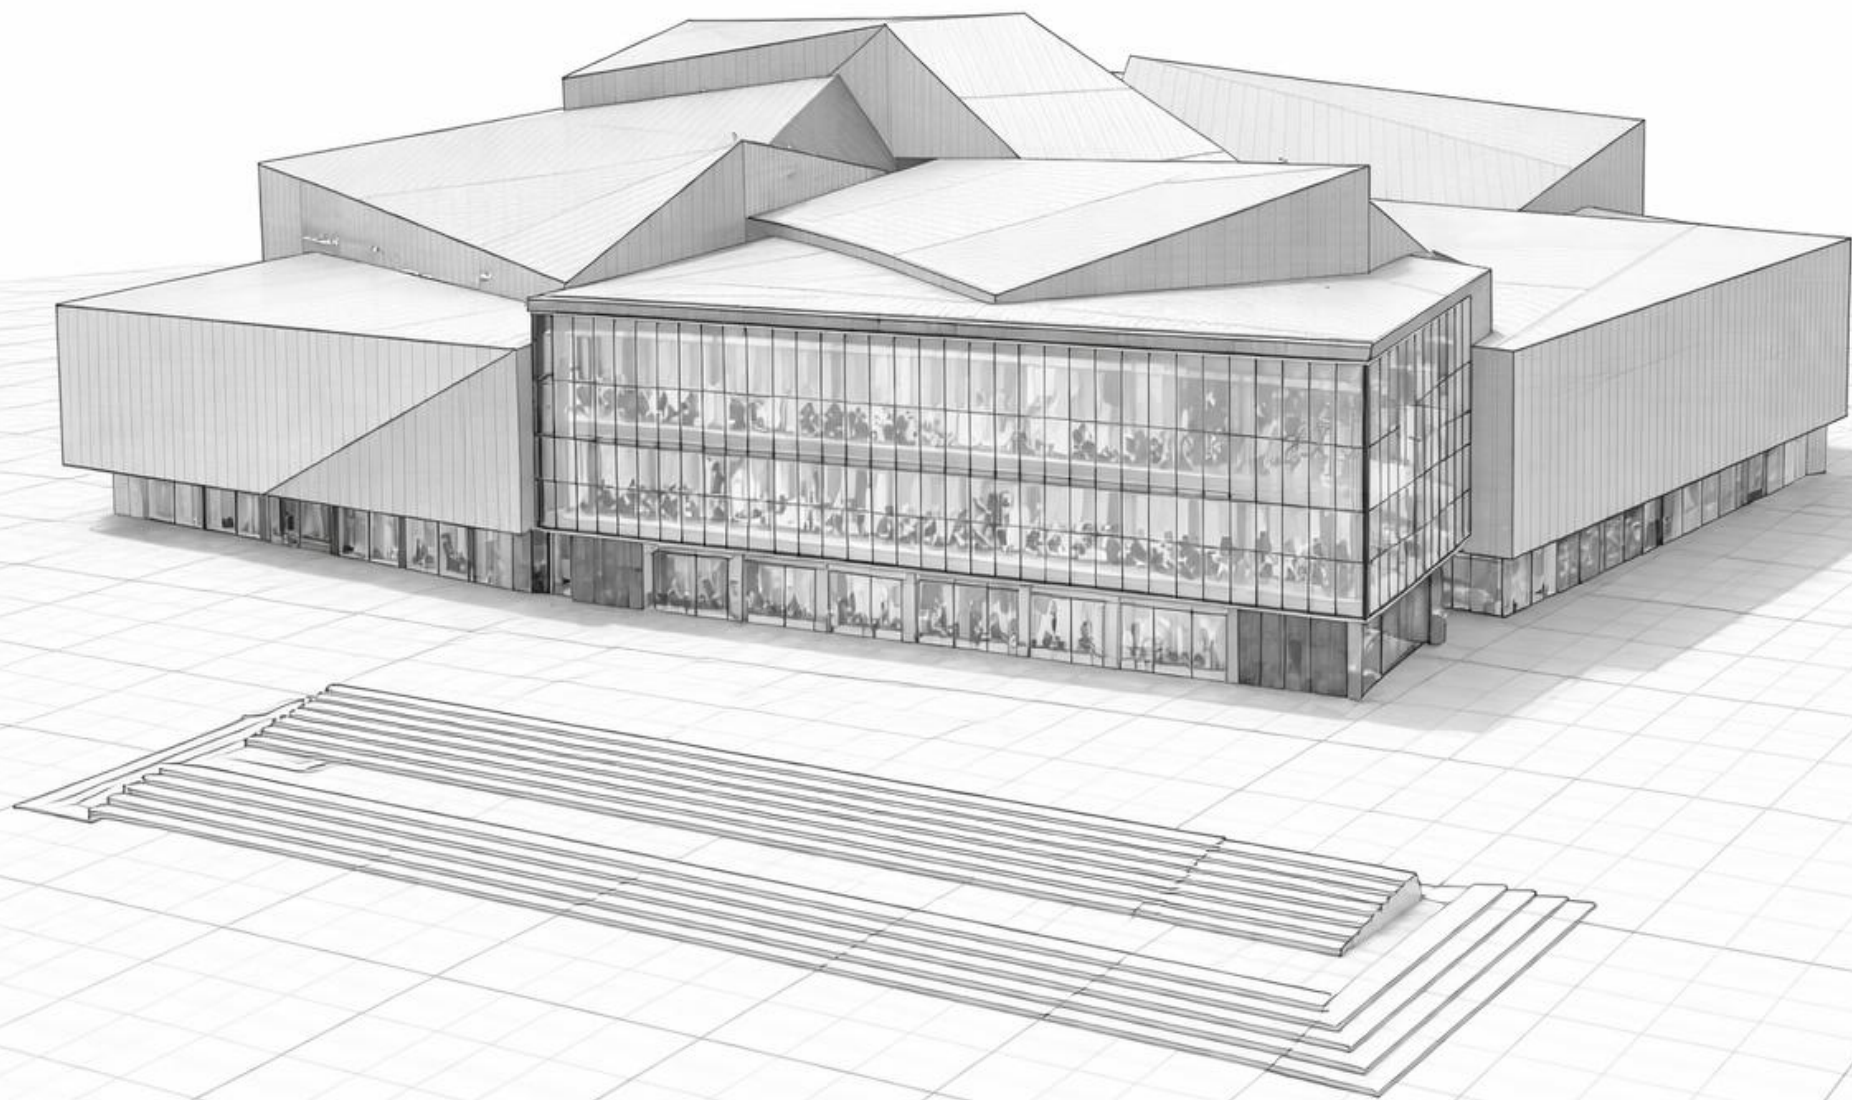

The Congress Center will enable:

- Scientific congresses and symposia** with national and international faculty
- Clinical education and hands-on training** (including simulation and device training)
- Roundtables and expert panels** to discuss guidelines, pathways, and unmet needs
- Innovation showcases** for medical devices and hospital technologies
- University–industry collaboration events** (research partnerships, talent, translational projects)

- The future project envisions the creation of a large contemporary square in future area in Europe(to be defined), at the confluence of the main pedestrian flows. This 5,000-square-meter flat space could become a new public and community hub, hosting outdoor cultural events and performances for the Congress Center, the trade fair.
- The project proposes equipping the square with a pool of water extending to the lakeshore. This body of water reflects light onto the Congress Center building and makes water an irreplaceable element in its urban landscape. Finally, a pathway extends to the lake with a dock for boats and public transport: an opportunity that could give the Congress Center its identity and resonance.

Facilities & Spaces

- Private offices of varying sizes
- Coworking areas
- Meeting rooms and conference halls
- Training classrooms
- Event spaces
- Parking facilities (where available)
- Common areas (office lounge, break zones)
