Sterilisation centres employ this equipment, a height-adjustable packaging table, in their packaging sections. Before moving on to the next stage of sterilisation, this table is used to package, check, and manage textiles and equipment that come from the washing sections. As a result, it fits precisely in between the sterilisation and washing phases. Several accessories, such as shelving and a roll holder cutter with a tape dispenser, are attached to the table to make the packing and inspection process easier.
