

## Treatment Rationale

- Preference for minimally invasive procedures
- Strong integration with surgical practice
- Chemotherapy remains a widely used therapeutic option
- Need to improve selectivity and reduce adverse effects

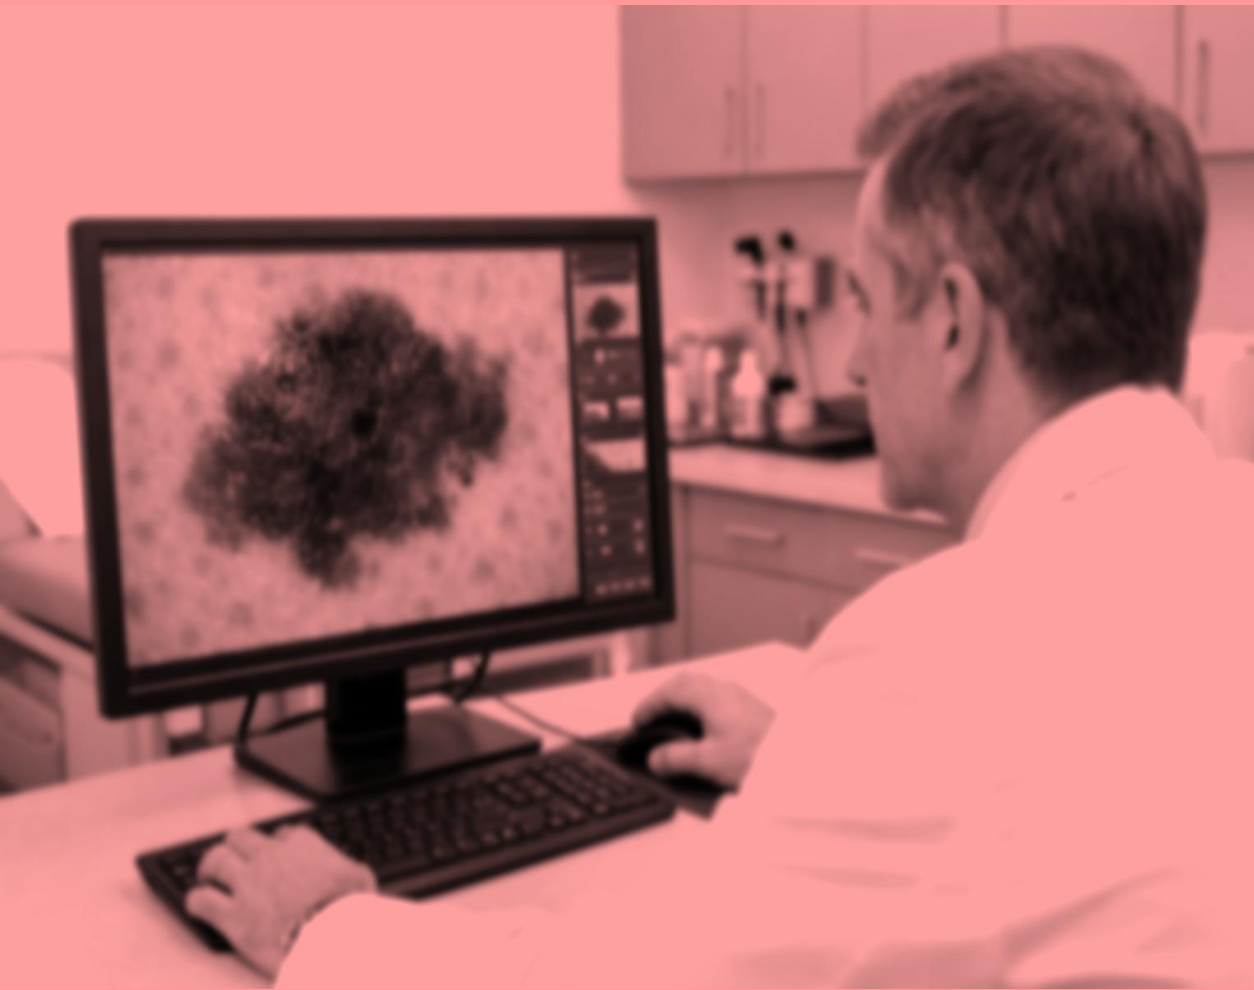

## Global Impact of Skin Cancer

- Skin cancer is among the leading causes of cancer-related deaths worldwide
- Hundreds of thousands of new melanoma cases diagnosed annually
- Significant healthcare burden in both developed and emerging markets
- High economic costs associated with long-term treatment

## BENIGN SKIN LESION REMOVAL

## BLU-U PHOTODYNAMIC THERAPY

## •**Scalpels and Blades**

### •**Forceps:**

- Adson dressing forceps (serrated) for handling gauze and materials
- Adson tissue forceps (1×2 teeth), often tungsten carbide, for gentle tissue grasping

- Bishop-Harmon forceps for delicate tissue manipulation

- Curettes:** Fox dermal curettes in various sizes for scraping and debulking tumors.

- Scissors:** Iris scissors (straight or curved) for fine cutting and tissue dissection.

- Hemostats:** Halsted mosquito forceps for clamping small blood vessels and controlling bleeding.

- Electrosurgical Unit (Hyfrecator):** Used for coagulation and hemostasis.

- Needle Holders:** Mayo-Hegar needle holders for secure handling of sutures.

- Skin Hooks:** Fine hooks for gentle tissue retraction and improved visualization.

- Gauze and Sponges:** Sterile gauze for cleaning, absorption, and pressure control.

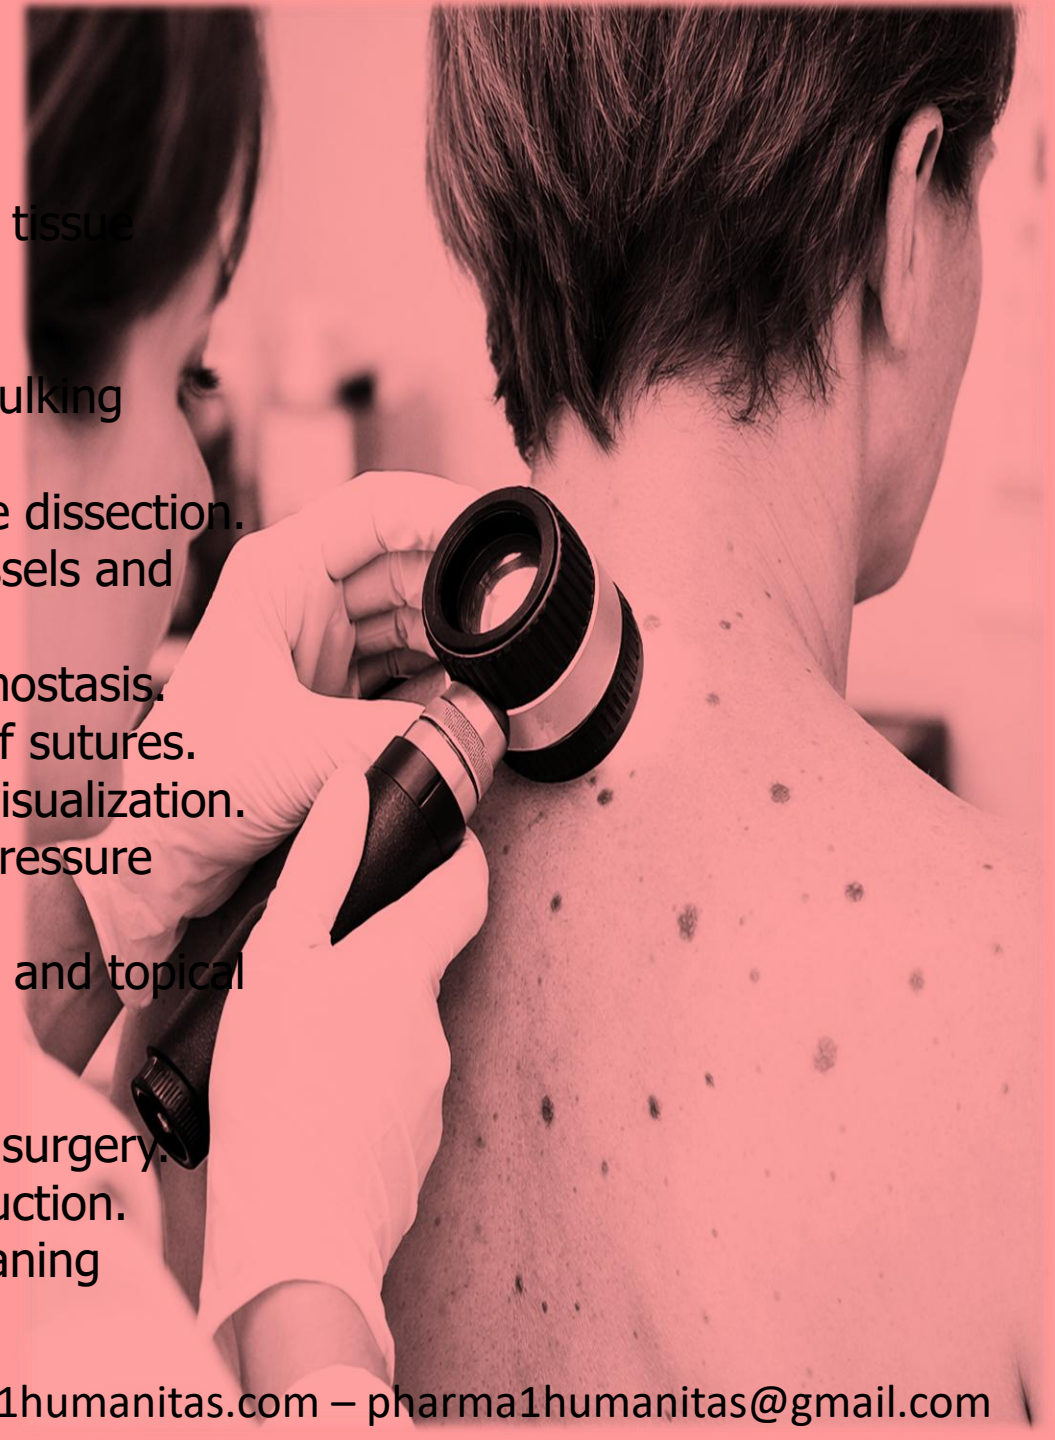

- Cotton-Tipped Applicators:** For applying antiseptics, anesthetics, and topical agents.

- Local Anesthetics:** Such as lidocaine, to numb the surgical area.

- Biopsy Punches:** Used for diagnostic tissue sampling before Mohs surgery.

- Suture Materials:** Various sutures for wound closure and reconstruction.

- Sterilization Equipment:** Ultrasonic cleaners, autoclaves, and cleaning solutions for instrument maintenance.

## Our Services

### Non-Surgical Facelift

Non-invasive lifting and tightening procedures designed to rejuvenate the face and improve skin firmness without surgery.

### Tattoo Removal

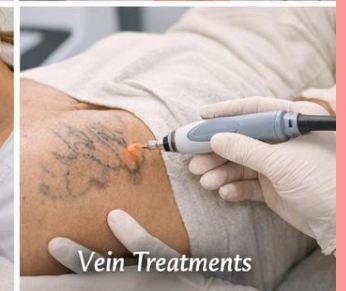

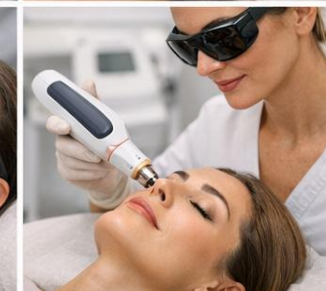

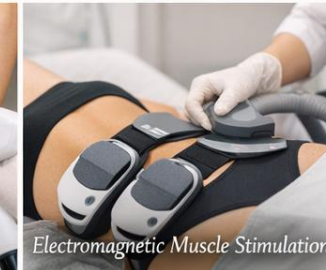

Progressive laser-based treatments for the safe and effective removal of unwanted tattoos.

### Vein Treatments

Targeted medical treatments to reduce the appearance of visible veins and vascular imperfections.

Injectable vein therapy

Light-based vascular treatments

## *Anti-Aging & Sun Damage*

## *Body Contouring*

## *Hair Loss Treatments*

## *Laser & Vein Treatments*

## Anti-Aging & Sun Damage

Innovative treatments designed to improve skin quality, reduce visible signs of aging, and repair damage caused by environmental exposure.

- Fractional laser skin resurfacing
- Deep cleansing and hydrating facial treatments
- Regenerative plasma-based therapies
- Medical microneedling
- Plasma skin tightening treatments
- Radiofrequency-assisted microneedling

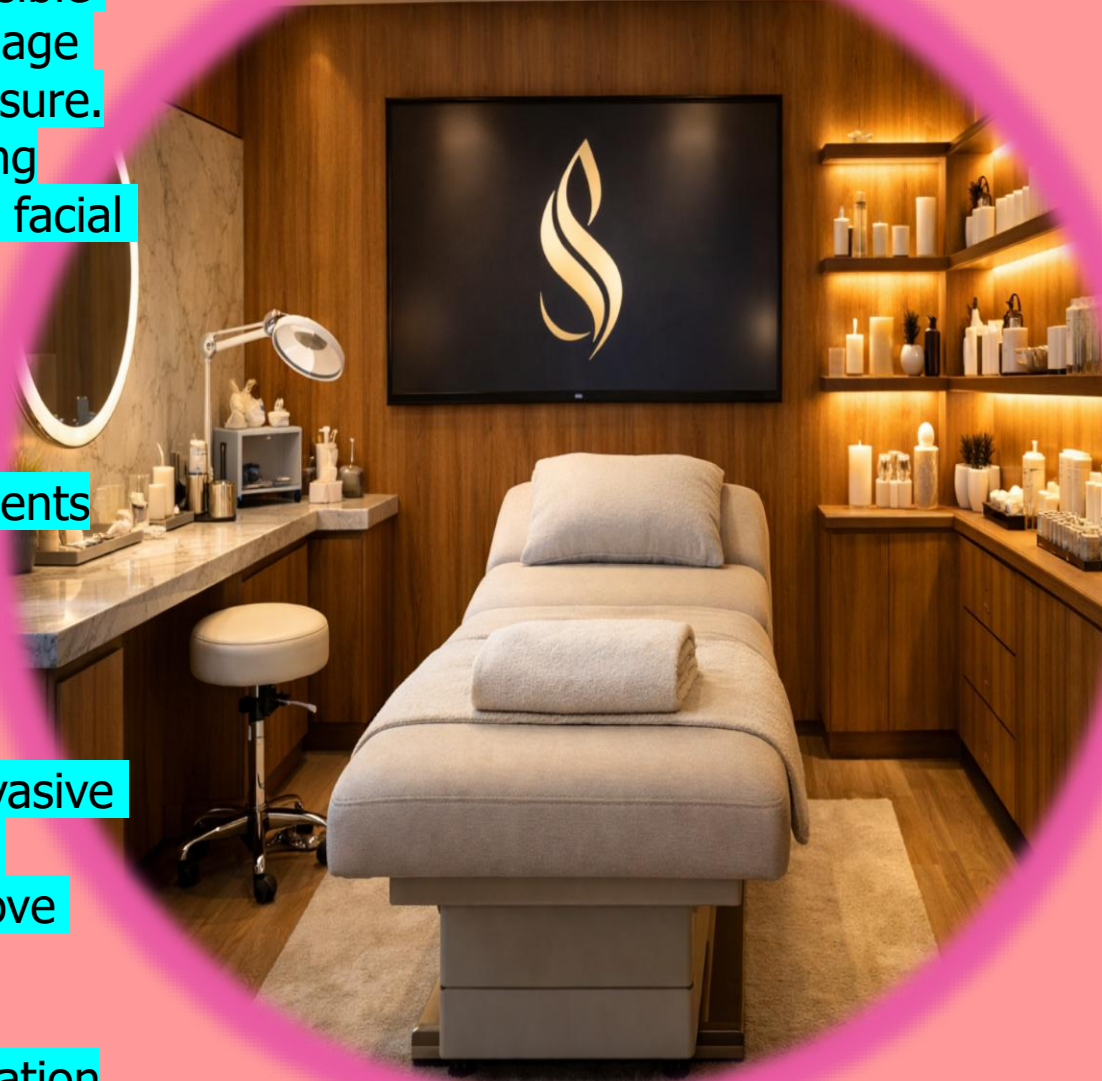

## Body Contouring

Non-invasive and minimally invasive solutions to reshape the body, reduce localized fat, and improve muscle tone.

Cryolipolysis fat reduction

Electromagnetic muscle stimulation

Combined fat reduction and muscle toning therapies

## Hair Loss Treatments

Personalized protocols aimed at stimulating hair growth and improving scalp health.

- Medical hair restoration programs
- Regenerative plasma scalp treatments

## Hair Removal

Advanced light-based systems for long-lasting hair reduction on all skin types.

- Intense pulsed light hair removal
- Medical-grade laser hair reduction

## **Electromagnetic Muscle Stimulation**

High-intensity electromagnetic treatments designed to strengthen, tone, and define muscles.

- Non-invasive muscle-building therapies
- Advanced body-toning solutions

## **Injectable Treatments**

Medical aesthetic injectables to soften expression lines, restore facial volume, and enhance natural contours.

- Neuromodulator injections
- Dermal fillers
- Fat-dissolving injections

## **Intense Pulsed Light (IPL) Treatments**

Light-based therapies to improve skin tone, reduce redness, and address pigmentation concerns.

- Photorejuvenation treatments
- Vascular and pigment correction therapies

## **Laser Treatments**

Advanced laser-based solutions for skin resurfacing, vascular concerns, pigmentation irregularities, hair removal, and skin tightening.

- Fractional resurfacing lasers
- Pigment and tattoo removal lasers
- Vascular laser treatments
- Precision hair removal lasers

- ✓ **Advanced therapeutic technology designed for targeted cancer treatment.**
- ✓ **Enhances treatment effectiveness while reducing systemic toxicity.**
- ✓ **Focuses on precision delivery and controlled release.**
- ✓ **Aims to preserve healthy tissue and immune function**

## – Why Melanoma

- One of the most aggressive forms of skin cancer
- High mortality rate if not treated early
- Early intervention can lead to up to 90% complete remission
- Strong unmet need for safer and more effective therapies
