CASA DI RIPOSO VILLA DELLA SALUTE

This initiative was originally designed to develop a residential care facility for elderly assistance. The concept was later expanded to meet broader community needs by introducing a multidisciplinary diagnostic center, accessible not only to residents but also to external patients. The project is located in Central Italy, within a quiet and strategically positioned area.

Future clinical services

The project includes the development of: A long-term care residence providing continuous assistance for elderly individu.

A multispecialty diagnostic center offering medical tests and specialist consultations.

The facility will provide approximately 60 beds.

**Magnetic Resonance Imaging
Systems**

**Computed Tomography
Scanners**

Digital Radiology Units

**Mammography and
Bone Densitometry Systems**

**Ultrasound and
Echocardiography Devices**

**Integrated Digital Systems for
Reporting and Patient Data Management**

Types of Examinations

**Gastrointestinal
Analysis**

**Bacterial Infection
Screening**

**Cancer Prevention
& Early Detection**

Residential Care Facility

The decision to establish a senior care residence is based on two key factors:

- The **rapid aging of the population**
- The **insufficient availability of suitable healthcare facilities**

To ensure sustainability in the coming decades, a significant increase in residential care capacity is required, alongside enhanced home-care services.

The facility will provide **approximately 60 beds**.

CASA DI RIPOSO VILLA DELLA SALUTE

Diagnostic Equipment

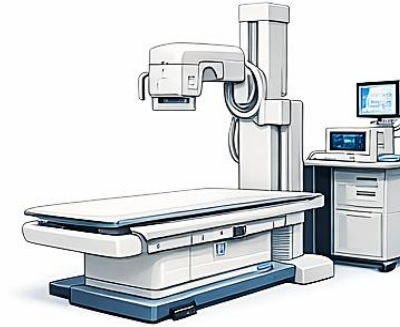

The diagnostic center will be equipped with **advanced medical technologies**, including:

Magnetic resonance
imaging systems

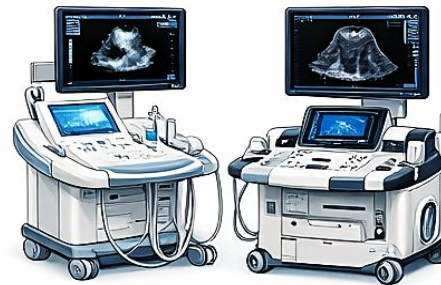

Computed tomography
scanners

Digital radiology
units

Mammography and bone
densitometry systems

Ultrasound and
echocardiography devices

Integrated digital systems for
reporting and patient data
management

Care & Comfort

The structure is designed to accommodate **around 60 vulnerable and fragile individuals** in a protected and welcoming environment.

In addition to medical and healthcare services, the facility emphasizes:

- Comfort and well-being
- Privacy and relaxation
- Social interaction and integration

Dedicated areas will support **rehabilitation therapies** when required.

Diagnostic Center

The imaging and diagnostic laboratory has been designed to:

- Serve resident patients
- Act as a **core service hub** for the surrounding community

The center will be **fully accessible to outpatients**, fostering synergy between residential care and diagnostic services while addressing local healthcare demands.
